

Accurately Weighing Africa

OneWeigh Product

# Software Range

Cost effective flexibility

Sasco has over 100 years weighing experience and is the leader in industrial weighing in Southern Africa. Closely aligned to accurate and reliable weighing is rapidly growing demand for weighing related software solutions.

To meet the growing demand Sasco has developed over the past 5 years a range of cost effective weighing information solutions build on the Microsoft approved OneWeigh platform. Available on the new OneWeigh platform are the following solutions:

## SASCO ProWeigh

Standard weighbridge software that delivers the basics of weighing transaction capture.

## SASCO MultiBridge

Standard weighbridge software that allows for the capture of weighing transactions from multiple weighbridges by a single PC into a single database

## SASCO AxleWeigh v2.0

Provides all the capabilities of the standard weighbridge package and incorporates the Bilanciai D800 indicator's ability to capture indicative axle weights as a vehicle drives onto a full length weighbridge. All axle weights are stored in the database and referenced on the weighing ticket.

## SASCO AxleCheck

Incorporates all the standard weighbridge software package functionalities and enables the ability to check the axle weights of a vehicle on either a static axle weigher or a full length weighbridge. For the full length weighbridge the vehicle is required to stop as each axle drives onto the weighbridge or drives off the weighbridge.

## SASCO AutoWeigh

In an effort to combat fraud and illicit activities around the weighbridge environment, AutoWeigh provides increased security and the facilitation of information capture. Essentially the weighing transaction is "automated" thereby reducing the amount of time required to populate information and the ability to capture fraudulent activity.

# System Features

Functionality	ProWeigh	Multibrige	AxleWeigh	AxleCheck	AutoWeigh
<b>REQUIRED HARDWARE</b>					
Indicators	Any Make and Model with Serial Communication	Any Make and Model with Serial Communication	D800 Bilanciai Indicator	Any Make and Model with Serial Communication	Any Make and Model with Serial Communication
Comms Settings	Configurable to any Indicator	Configurable to any Indicator	D800 Bilanciai Indicator	Configurable to any Indicator	Configurable to any Indicator
Weighbridge connections	One	Greater than One	One	One	One

Position Check	No	No	No	No	Infra-red Alignment Sensor Check

## Installation Software Prerequisites

The  Operating System has the following software prerequisites. These prerequisites will be automatically installed if necessary during the Software Installation:-

- Microsoft .NET Framework v2.0
- Runtime Components for Crystal Reports for Visual Studio 2008
- Microsoft Windows Installer 3.1
- Microsoft SQL Server 2005 Express or higher

## Minimum Requirements

The  Operating System has the following minimum hardware and Windows operating system requirements:-

- Intel Pentium IV 1.8ghz or higher
- Working keyboard, mouse and on-board or PCI serial port
- 512MB system memory, with 1GB recommended
- Microsoft Windows XP or Microsoft Windows 7 (32 or 64 bit)
- Sasco OneWeigh has been tested to meet all of the technical requirements to be compatible with Windows® 7, including 64 bit.
